- 1. Given the evolution of DBMSs, business data is now:
- **a.** Stored in main memory and stays resident there even after the application that uses it terminates.
- **b.** Stored only if it is relevant to business decisions.
- c. Stored indefinitely in case it's needed since storing it is much cheaper now.
- d. None of the above.

**Answer:** (b). Stored only if it is relevant to business decisions.

- 2. Which of the following is not true of a DBMS?
- a. It provides efficient storage and retrieval of data.
- **b.** It has evolved over the years into a fairly simple set of tools that are relatively easy to master.
- c. Marketplace demands and product innovation have led to the development of a broad range of features.
- d. None of the above.

Answer: (b).It has evolved over the years into a fairly simple set of tools that are relatively easy to master.

- **3.** Nonprocedural access to a database:
- **a.** Can provide a dramatic improvement in software productivity.
- **b.** Allows a user to submit queries to a database without having to know how the data will be retrieved.
- c. Is supported by more than one tool in most DBMSs.
- **d.** All of the above.

**Answer:** (d). All of the above.

- **4.** Which of the following statements is not true of a desktop DBMS?
- a. They usually run on personal computers or small servers.

- **b.** They have a much lower cost than other DBMSs.
- c. Although useful for processing ad hoc queries, they cannot perform transaction processing.
- **d.** They usually support databases used by work teams and small businesses.

Answer: (c). Although useful for processing ad hoc queries, they cannot perform transaction processing.

- 5. In the evolution of database technology, second-generation products are considered to be the first true DB
- a. They were "navigational", i.e. the programmer had to write code to navigate through a network of linked re
- **b.** Of their foundation on mathematical relations and associated operators.
- c. They supported sequential and random searching.
- d. They could manage multiple entities and relationships.

**Answer:** (d). They could manage multiple entities and relationships.

- 6. In the evolution of database technology, third-generation products supplanted second-generation systems
- **a.** Nonprocedural database access was an improvement over navigational access.
- **b.** IBM supported the CODASYL standard of database definition and manipulation.
- c. Nonprocedural languages were still not very efficient.
- **d.** All of the above.

Answer: (a). Nonprocedural database access was an improvement over navigational access.

- 7. Which statement is not true of the Three Schema Architecture?
- **a.** It is an official standard of the American Standards Institute (ANSI).
- **b.** It is an architecture for compartmentalizing database descriptions.
- c. Its details have been widely adopted in third- and fourth-generation DBMSs.

**d.** None of the above.

Answer: (c). Its details have been widely adopted in third- and fourth-generation DBMSs.

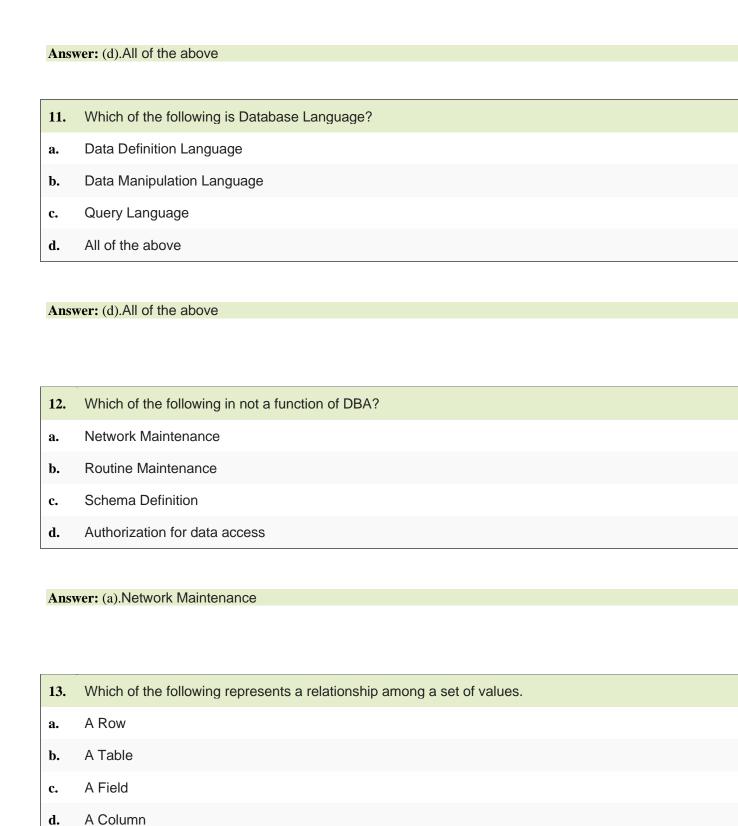

- **8.** Which of the following statements is not true of information resource management?
- a. It is very different and much more challenging than managing the other physical resources of an organization
- b. Its goal is to use information technology as a tool for processing, distributing, and integrating information t
- c. Its emergence has created new management responsibilities.
- d. None of the above.

Answer: (a). It is very different and much more challenging than managing the other physical resources of an org

- 9. A Database Management System (DBMS) is
- a. Collection of interrelated data
- b. Collection of programs to access data
- c. Collection of data describing one particular enterprise
- d. All of the above

Answer: (d). All of the above

- **10.** Data Manipulation Language enables users to
- a. Retrieval of information stored in database
- **b.** Insertion of new information into the database
- c. Deletion of information from the database
- **d.** All of the above

Answer: (a).A Row

14.	Column header is refer as
a.	Table
b.	Relation
c.	Attributes
d.	Domain
Ansv	ver: (c).Attributes
15.	Which of the following is not Modification of the Database?
a.	Deletion
b.	Insertion
c.	Sorting
d.	Updating
Ansv	ver: (c).Sorting
16.	Which of the following in true regarding Null Value?
a.	Null = 0
b.	Null < 0
c.	Null > 0
d.	Null <> 0
Ansv	ver: (d).Null <> 0
17.	ODBC stands for
a.	Offline database connection

b.	Oriented database connection
c.	Open database connection
d.	None of the above
Ansv	wer: (c).Open database connection
18.	refers to the correctness and completeness of the data in a database?
a.	Data security
b.	Data integrity
c.	Data constraint
d.	Data independence
10	Data integrity constraints are used to
19.	Data integrity constraints are used to:  Central who is allowed access to the data.
a.	Control who is allowed access to the data
b.	Ensure that duplicate records are not entered into the table
c.	Improve the quality of data entered for a specific property (i.e., table column)
d.	Prevent users from changing the values stored in the table
Ansv	wer: (c).Improve the quality of data entered for a specific property (i.e., table column)
20.	The DBMS acts as an interface between what two components of an enterprise-class database system?
a.	Database application and the database
b.	Data and the database
c.	The user and the database application

## Answer: (a). Database application and the database 1. Which of the following is not a level of data abstraction? Physical Level a. Critical Level b. Logical Level c. d. View Level Answer: (b).Critical Level 2. Which of the following is not an Schema? Database Schema Physical Schema b. Critical Schema c. Logical Schema d. Answer: (c).Critical Schema 3. Which of the following is a Data Model? Entity-Relationship model Relational data model b. Object-Based data model c. All of the above d. Answer: (d). All of the above

Logical design of database is called 4. Database Instance a. Database Snapshot b. Database Schema c. d. All of the above Answer: (c). Database Schema Snapshot of the dta in the database at a given instant of time is called 5. Database Schema a. Database Instance b. Database Snapshot c. All of the above d. Answer: (b). Database Instance Which of the following is the structure of the Database? 6. Table Schema b. Relation c. None of these d. Answer: (b). Schema

7.	A logical description of some portion of database that is required by a user to perform task is called as
a.	System View
b.	User View
c.	Logical View
d.	Data View
Ans	wer: (b).User View
8.	is a classical approach to database design?
a.	Left – Right approach
b.	Right – Left approach
c.	Top – Down approach
d.	Bottom – Up approach
Ans	wer: (c).Top – Down approach
9.	Which of the following is the oldest database model?
a.	Relational
b.	Hierarchical
c.	Physical
d.	Network
Ansv	wer: (d).Network
Ansv	
Ansv	
Ansv	

Ang	wer: (b).Maximum cardinality
	ver (o)via.minim ourdinanty
11.	Which of the following data constraints would be used to specify that the value of cells in a column must be
a.	A domain constraint
b.	A range constraint
c.	An intrarelation constraint
d.	An interrelation constraint
Ansv	wer: (a).A domain constraint
12.	In a 1:N relationship, the foreign key is placed in:
12. a.	In a 1:N relationship, the foreign key is placed in: either table without specifying parent and child tables.
a.	either table without specifying parent and child tables.
a. b.	either table without specifying parent and child tables. the parent table.
a. b. c.	either table without specifying parent and child tables. the parent table. the child table.
a. b. c. d.	either table without specifying parent and child tables. the parent table. the child table.
a. b. c. d.	either table without specifying parent and child tables.  the parent table.  the child table.  either the parent table or the child table.
a. b. c. d.	either table without specifying parent and child tables.  the parent table.  the child table.  either the parent table or the child table.
a. b. c. d.	either table without specifying parent and child tables.  the parent table.  the child table.  either the parent table or the child table.
a. b. c. d.	either table without specifying parent and child tables.  the parent table.  the child table.  either the parent table or the child table.  wer: (c).the child table.
a. b. c. d.  Ansv	either table without specifying parent and child tables.  the parent table.  the child table.  either the parent table or the child table.  wer: (c).the child table.  Which of the following column properties specifies whether or not cells in a column must contain a data with the parent table.

Maximum cardinality

Greater Entity Count (GEC)

b.

c.

d.

ERD

d.	Data constraints
Ansv	wer: (a).Null status
14.	A primary key should be defined as:
a.	NULL
b.	NOT NULL
c.	Either of the above can be used
d.	None of the above are correct
Ansv	wer: (b).NOT NULL
15.	Which of the following column properties would be used to specify that cells in a column must contain a m
a.	Null status
b.	Data type
c.	Default value
d.	Data constraints
Ansv	wer: (b).Data type
16.	If a denormalization situation exists with a one-to-one binary relationship, which of the following is true?
a.	All fields are stored in one relation.
b.	All fields are stored in two relations.
c.	All fields are stored in three relations.

	( ) All fields are stoned in an aplatica
Ansv	wer: (a).All fields are stored in one relation.
17.	Selecting a data type involves which of the following?
a.	Maximize storage space
b.	Represent most values
c.	Improve data integrity
d.	All of the above
Ansv	ver: (c).Improve data integrity
18.	What is the best data type definition for Oracle when a field is alphanumeric and has a length that can var
a.	VARCHAR2
b.	CHAR
c.	LONG
d.	NUMBER
Ansv	ver: (a).VARCHAR2
19.	A multidimensional database model is used most often in which of the following models?
a.	Data warehouse
b.	Relational
c.	Hierarchical
d.	Network
Ansv	ver: (a).Data warehouse

- 20. Which of the following is not a factor to consider when switching from small to large block size?a. The length of all of the fields in a table row.
  - **b.** The number of columns
  - c. Block contention
  - d. Random row access speed

## Answer: (b). The number of columns

- 1. A Relation is a
- a. Subset of a Cartesian product of a list of attributes
- **b.** Subset of a Cartesian product of a list of domains
- c. Subset of a Cartesian product of a list of tuple
- **d.** Subset of a Cartesian product of a list of relations

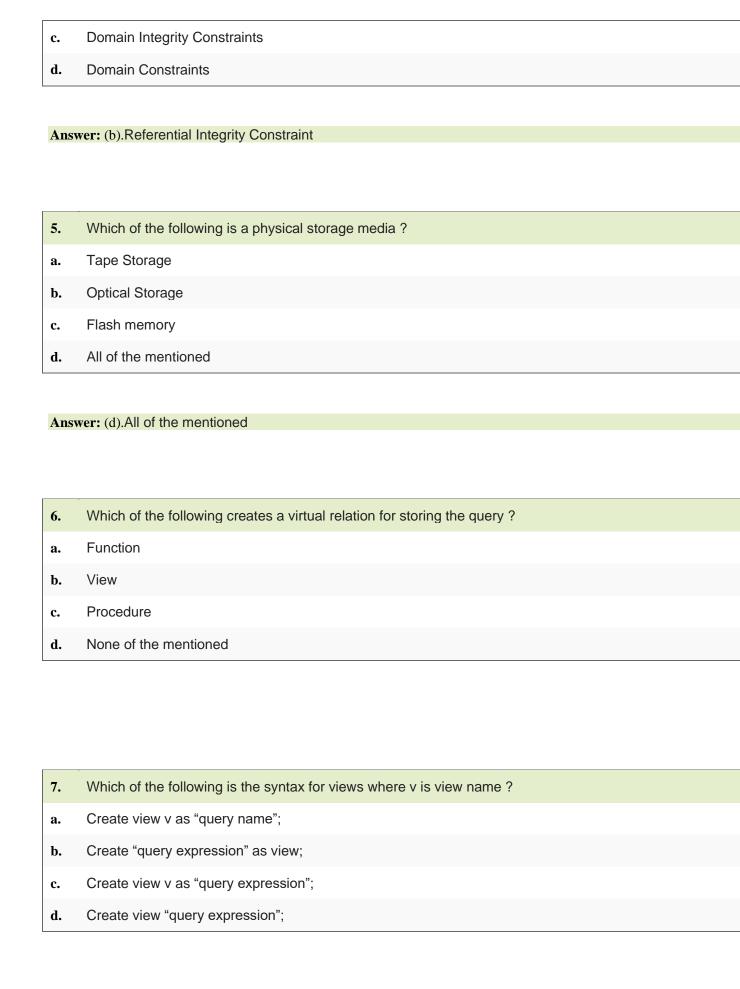

## Answer: (b). Subset of a Cartesian product of a list of domains

- 2. In mathematical term Table is referred as
- a. Relation
- **b.** Attribute
- c. Tuple
- d. Domain

Answer: (a). Relation

3.	In mathematical term Row is referred as
a.	Relation
b.	Attribute
c.	Tuple
d.	Domain
Ansv	wer: (c).Tuple
4.	allow us to identify uniquely a tuple in the relation.
a.	Superkey
b.	Domain
c.	Attribute
d.	Schema
Ansv	wer: (a).Superkey
5.	Minimal Superkeys are called
a.	Schema keys
b.	Candidate keys
c.	Domain keys
d.	Attribute keys
,	
Ansv	wer: (b).Candidate keys
1.	Which of the following is correct regarding Aggregate functions?

b.	it takes a list of values and return a list of values as result
c.	it takes a single value and returns a list of values as result
d.	it takes a single value and returns a single value as result
Ans	wer: (a).it takes a list of values and return a single values as result
2.	Which of the following option is use to retrieval of data?
a.	Stack
b.	Data Structure
c.	Linked list
d.	Query
	wer: (d).Query
Ans	
	wer: (d).Query  Establishing limits on allowable property values, and specifying a set of acceptable, predefined options the of:
Ans	Establishing limits on allowable property values, and specifying a set of acceptable, predefined options the
Ans	Establishing limits on allowable property values, and specifying a set of acceptable, predefined options the of:
Ans 3. a.	Establishing limits on allowable property values, and specifying a set of acceptable, predefined options that of:  Attributes
3. a. b.	Establishing limits on allowable property values, and specifying a set of acceptable, predefined options that of:  Attributes  Data integrity constraints
3. a. b. c.	Establishing limits on allowable property values, and specifying a set of acceptable, predefined options that of:  Attributes  Data integrity constraints  Method constraints
3. a. b. c. d.	Establishing limits on allowable property values, and specifying a set of acceptable, predefined options the of:  Attributes  Data integrity constraints  Method constraints
3. a. b. c. d.	Establishing limits on allowable property values, and specifying a set of acceptable, predefined options the of:  Attributes  Data integrity constraints  Method constraints  Referential integrity constraints
3. a. b. c. d.	Establishing limits on allowable property values, and specifying a set of acceptable, predefined options the of:  Attributes  Data integrity constraints  Method constraints  Referential integrity constraints
3. a. b. c. d.	Establishing limits on allowable property values, and specifying a set of acceptable, predefined options the of:  Attributes  Data integrity constraints  Method constraints  Referential integrity constraints  wer: (b).Data integrity constraints

Ans	Answer: (c).Create view v as "query expression";	
1.	Disadvantages of File systems to store data is:	
a.	Data redundancy and inconsistency	
b.	Difficulty in accessing data	
c.	Data isolation	
d.	All of the above	
Ans	wer: (d).All of the above	
2.	Which level of RAID refers to disk mirroring with block striping?	
a.	RAID level 1	
b.	RAID level 2	
c.	RAID level 0	
d.	RAID level 3	
Ans	wer: (a).RAID level 1	
3.	Optical disk technology uses	
a.	Helical scanning	
b.	DAT	
c.	a laser beam	
d.	RAID	
Ans	wer: (d).RAID	

1. State true or false: SQL specifies a way of mentioning functional dependencies a. True b. False c. May be d. Can't say  Answer: (b).False  2. State true or false: Most current database systems do not support constraints on materialized view a. True b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies c. Multi-purpose dependencies d. None of the mentioned			
b. False c. May be d. Can't say  Answer: (b).False  2. State true or false: Most current database systems do not support constraints on materialized view a. True b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies	1.	State true or false: SQL specifies a way of mentioning functional dependencies	
c. May be d. Can't say  Answer: (b).False  2. State true or false: Most current database systems do not support constraints on materialized view a. True b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies	a.	True	
Answer: (b).False  2. State true or false: Most current database systems do not support constraints on materialized view a. True b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies	b.	False	
Answer: (b).False  2. State true or false: Most current database systems do not support constraints on materialized view  a. True b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies	c.	May be	
2. State true or false: Most current database systems do not support constraints on materialized view  a. True  b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as  a. Equality generating dependencies  b. Tuple generating dependencies  c. Multi-purpose dependencies	d.	Can't say	
2. State true or false: Most current database systems do not support constraints on materialized view  a. True  b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as  a. Equality generating dependencies  b. Tuple generating dependencies  c. Multi-purpose dependencies			
a. True b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies	Ans	wer: (b).False	
a. True b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies			
a. True b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies			
b. False c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies	2.	State true or false: Most current database systems do not support constraints on materialized view	
c. May be d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies	a.	True	
d. Can't say  Answer: (a).True  3. Multi valued dependencies are also called as  a. Equality generating dependencies  b. Tuple generating dependencies  c. Multi-purpose dependencies	b.	False	
Answer: (a).True  3. Multi valued dependencies are also called as a. Equality generating dependencies b. Tuple generating dependencies c. Multi-purpose dependencies	c.	May be	
<ul> <li>3. Multi valued dependencies are also called as</li> <li>a. Equality generating dependencies</li> <li>b. Tuple generating dependencies</li> <li>c. Multi-purpose dependencies</li> </ul>	d.	Can't say

<ul> <li>a. Equality generating dependencies</li> <li>b. Tuple generating dependencies</li> <li>c. Multi-purpose dependencies</li> </ul>			
<ul><li>b. Tuple generating dependencies</li><li>c. Multi-purpose dependencies</li></ul>	3.	Multi valued dependencies are also called as	
c. Multi-purpose dependencies	a.	Equality generating dependencies	
	b.	Tuple generating dependencies	
d. None of the mentioned	c.	Multi-purpose dependencies	
	d.	None of the mentioned	
Answer: (b). Tuple generating dependencies	Ans	wer: (b).Tuple generating dependencies	
	4.	Functional dependencies are sometimes referred to as	
4. Functional dependencies are sometimes referred to as	a.	Equality generating dependencies	
	4	Functional dependencies are sometimes referred to as	

b.	Tuple generating dependencies
c.	Multi-purpose dependencies
d.	None of the mentioned
Ans	wer: (a).Equality generating dependencies
5.	The is a set of all functional and multi values dependencies implied by a set of functional depen
a.	Star
b.	Closure
c.	Derivation
d.	Evolution
6.	State true or false: If a relational schema is in NF and A is a subset of R and B is also a subset values dependency.
a.	
	1
b.	1 2
b. c.	
	2
c.	2 3
c. d.	2 3
c. d.	2 3 4
c. d.	2 3 4
c. d.	2 3 4
c. d.	2 3 4 swer: (d).4
c. d. Ans	2 3 4  wer: (d).4  Which of the following normal forms does not exist?

c.	5NF
d.	None of the mentioned
Ans	wer: (d).None of the mentioned
1.	The SQL database language includes statements for:
a.	Database definition.
b.	Database manipulation.
c.	Database control.
d.	All of the above.
Ans	wer: (d).All of the above.
2.	A command to remove a relation from an SQL database
a.	Delete table name
b.	Drop table table name
c.	Erase table table name
d.	Alter table table name
Ans	wer: (b).Drop table table name
3.	Which SQL Query is use to remove a table and all its data from the database?
a.	Create Table
b.	Alter Table
c.	Drop Table
d.	None of these

4.	A type of query that is placed within a WHERE or HAVING clause of another query is called
a.	Super query
b.	Sub query
c.	Master query
d.	Multi-query
Answer: (b). Sub query	
5.	Aggregate functions are functions that take a as input and return a single value.
a.	Collection of values
b.	Single value
c.	Aggregate value
d.	Both a & b
6.	Select from instructor where dept name= 'Comp. Sci.'; Which of the following should be used to find the mean of the salary?
a.	Mean(salary)
b.	Avg(salary)
c.	Sum(salary)
d.	Count(salary)

Answer: (c).Drop Table

Answer: (b).Avg(salary
